Oxygen Phone Manager II: A Smart Companion for Your Nokia Cellphone

More Option to Manage Data and Settings of Your Nokia Phone from a PC

MOSCOW, Russia – May 17, 2005: Oxygen Software today announces the release of version 2.8 of Oxygen Phone Manager II for Nokia phones. This application is designed for Nokia owners who can now easily manage the content and settings of their cellphone from a personal computer. The program is compatible with almost all models of Nokia cellphones from 1100 to 8910i and can communicate with the phone through different types of connections, including cables, Infrared or Bluetooth devices.

“Oxygen Phone Manager II will be the best companion for your Nokia phone,” said Nike Golubev, marketing communications manager at Oxygen Software. “Easy phone management is where it shines. For example, typing long SMS messages on the PC keyboard is a real relief compared to pressing tiny buttons and nervously switching between letter layouts. Another good thing is that you can easily restore the content and settings of the lost phone and save it to the new one. With the same simplicity, you can synch your phone with a PIM such as Microsoft Outlook and Lotus Notes or synch the phone book content across several cellphones.”

Oxygen Phone Manager II features an engaging list of functions that will meet all possible phone management needs. In just a few simple steps you can load, edit and rewrite your phonebook. Also, you can send, receive and organize your SMS, MMS messages whose content may vary from plain text, images to ringtones, sounds and even animations. By backing up the content of the messages, you can restore it in a new phone without any complexity. Along with messages, you can organize and manage your phone-based To-Do lists and schedules stored in the Calendar section.

The program also provides you with a single, easily accessible place for organizing the Gallery content, viewing images and listening to melodies. To make your phone the ultimate expression of your style, you can upload your favorite images, melodies and set your own wallpapers and logos. Added to this is the Ringtone Editor that allows you to import MIDI files, use a synthesizer to enter ringtones, play them on your PC and organize your Ringtones library among many other utilitarian functions.

Availability and Pricing

Oxygen Phone Manager II for Nokia phones is designed for Windows 98SE/Me/NT/2000/XP/Server 2003 and is available in two versions – Standard and Lite. The Standard version costs 29 Euro and offers its customers the unlimited functionality, whereas the Lite version costs 14.95 Euro and offers the functions related to entertainment only, for instance, loading images, melodies, SMS and MMS manager. A fully functional evaluation version can be downloaded for free at <http://www.opm-2.com/download/opm2.zip>.
